

ISSUE 5: Confusing Login Prompt Asking for "Username" Instead of "Email"

Description:

- The login prompt asked for a "username" when the system was looking for an email.
- This inconsistency caused login errors and confusion.

Resolved Issue:

The screenshot shows a web browser window with the address bar displaying `localhost/docs#/Login%20and%20Registration/login_login__post`. The page content is a login form titled `POST /Login/ Login`. The form has a `Parameters` section with `No parameters` and a `Request body` section with a `required` label and a dropdown menu set to `application/x-www-form-urlencoded`. The form contains two input fields: `email` (string, required) and `password` (string, required). A blue `Execute` button is at the bottom.
